

Orbi AX6000

MESH WIFI 6 SYSTEM: FAST, FULL-HOME COVERAGE

It doesn't take long to set up the Orbi AX6000. You don't even need a tech buddy to be there. You're halfway there if you can plug in a light.

Using the Orbi App to Set Up?

What you need:

- ▶ A modem that works and can connect to the internet
- ▶ Your Orbi AX6000 router and satellite(s)
- ▶ An Orbi App on a smartphone or tablet

Steps:

- ▶ Take the pieces out of the box. The router goes near the modem, and the satellite goes where the coverage declines.
- ▶ Turn them on. Wait for the white LED ring on top to blink.
- ▶ Link the router to the modem. Use the Ethernet cable that comes with it.
- ▶ Start the Orbi app. Do what it says. It tells you what to do next, such how to name your network, create a password, and check for firmware upgrades.

Other Setup Options (Setting Up the Browser Manually)

The app isn't working? Or do you simply like the old way better?

Setting up the browser:

- ▶ Link your PC to the Orbi network via WiFi or Ethernet.
- ▶ Open a web browser and type in orbilogin.com.
- ▶ Use the default login information that is on the label.
- ▶ Follow the instructions on the screen. Set up the name of the network, the password, and so forth.

This approach takes longer, but you have complete control if you want it.

Setting up the network: easy or hard, it's up to you.

You may keep things as they are after you're set up, or you can make little changes depending on how you use the internet.

Basic changes:

- ▶ Change the password and SSID
- ▶ Turn the Guest Network on and off
- ▶ Use the app to set parental controls
- ▶ Set up times when WiFi will be down (for devices or the full network)

More advanced changes:

- ▶ IP reservations, port forwarding, and DHCP settings
- ▶ VLAN tagging for certain ISPs
- ▶ Custom entries for DNS servers
- ▶ A traffic meter to keep an eye on data use

You can find all of this in the Orbi app or at orbilogin.com. But for most individuals, the default settings work well.

Thank You
